

Some TLC for your ERP

You wouldn't run a car day in and day out and expect it to still be in the same condition as when you first bought it. Your ERP system is no different. It works tirelessly to make your business more efficient, so it should come as no surprise that your system needs regular health checks.

That's why Gradient Consulting has introduced **ERPMOT**.

- Have there been changes in your system needs, business strategy or structure?
- Has there been a knowledge drain where key users have left the business?
- Or have you noticed your employees going back to using spreadsheets rather than using the system?

If people are working against the system rather than with it, then now is the time for an **ERPMOT** - and that's where we can help.

Tools at the ready

Our unique health check has three stages:

Preparation will give us a clear understanding of your business. We'll carry out a strategic review to work out where the business is going and how your system should support you.

Inspection comes next. Employees who use the ERP system will be invited to complete an in-depth questionnaire designed to gather feedback on how they use the system.

Results will combine the findings of the review and the survey into a comprehensive summary report.

Back on the road

Gradient Consulting will present you with an action plan which details the steps needed to ensure your ERP system meets your latest objectives, re-engages users, removes inefficiencies and safeguards your investment. Our specially designed **ERPMOT** ensures your system remains as hard-working and dedicated to your business as you are.
